Nivell 1

Exercici 1

A partir dels documents adjunts (estructura_dades i dades_introduir), importa les dues taules. Mostra les característiques principals de l'esquema creat i explica les diferents taules i variables que existeixen. Assegura't d'incloure un diagrama que il·lustri la relació entre les diferents taules i variables.

La base de datos transactions se compone de 2 tablas: transaction y company, que tienen una relación de n a 1, ya que la primera (transacciones) funciona como tabla de hechos registrando transacciones realizadas por distintas empresas que vienen descritas en la tabla de dimensiones company.

Su relación se establece en transaction.company_id y company.id

Tabla transactions

Field	Type	Null	Key
id	varchar(255)	NO	PRI
credit_card_id	varchar(15)	YES	
company_id	varchar(20)	YES	MUL
user_id	int	YES	
lat	float	YES	
longitude	float	YES	
timestamp	timestamp	YES	
amount	decimal(10,2)	YES	
declined	tinyint(1)	YES	

La tabla se describe con las siguientes columnas y tipos de variables:

- id: asigna un identificador único a la transacción, es la primary key (PK), no puede tener valores nulos y es de tipo varchar(255), lo que significa que puede albergar valores de hasta 255 caracteres.
- credit_card_id: contiene variables tipo varchar(15) lo que le permite almacenar hasta 15 caracteres, este campo sí permite valores nulos.

- company_id: este campo funciona como foreign key (FK) en relación con la tabla company, por lo que admite que se repita múltiples veces dentro de él (MUL), es de tipo varchar(20) y admite nulos.
- user_id: es una variable de tipo numérico entero y admite nulos.
- lat: contiene el valor de la latitud y es de tipo numérico float (decimal), admite nulos.
- longitude: al igual que la columna anterior pero almacena la longitud geográfica, también es de tipo float y admite nulos.
- timestamp: almacena en formato timestamp (yyyy-mm-dd hh:mm:ss) los datos de fecha y hora de la transacción. Admite nulos.
- amount: almacena el monto de la transacción, es tipo decimal(10,2) lo que significa que contará con hasta 10 dígitos antes del punto decimal y 2 después de este. Admite nulos.
- declined: de tipo tinyint(1), un valor numérico entero que sólo admite un dígito (0 o 1) por lo que funciona como boleano equivalente a valores True / False.

Tabla company

	Field	Type	Null	Key
▶	id	varchar(15)	NO	PRI
	company_name	varchar(255)	YES	
	phone	varchar(15)	YES	
	email	varchar(100)	YES	
	country	varchar(100)	YES	
	website	varchar(255)	YES	

La tabla se describe con las siguientes columnas y tipos de variables:

- id: es la primary key (PK) de la tabla, asigna un identificador a cada empresa, es de tipo varchar(15) por lo que admite hasta 15 caracteres, no admite nulos.
- company_name: almacena el nombre de la empresa, es de tipo varchar(255) admite hasta 255 caracteres, admite nulos.
- phone: contiene el número de teléfono de la empresa, es de tipo varchar(15), para hasta 15 caracteres, admite nulos.
- email: almacena el email de la empresa, es de tipo varchar(100), para hasta 100 caracteres, admite nulos.
- country: contiene el país de la empresa, es de tipo varchar(100) al igual que la columna anterior, admite nulos.
- website: almacena la dirección web de la empresa, es de tipo varchar(255) para hasta 255 caracteres, admite nulos.

Exercici 2

Utilitzant JOIN realitzaràs les següents consultes:

Llistat dels països que estan generant vendes.

```
SELECT DISTINCT c.country
  FROM company c
  JOIN transaction t
    ON c.id = t.company_id;
```

country
Germany
Australia
United States
New Zealand
Norway
United Kingdom
Italy
Belgium
Sweden
Ireland
China
Canada
France
Netherlands
Spain
